# POWERDUCTION

## HEAT without FLAME

### What is Powerduction?

Powerduction is the GYS range of industrial induction heating equipment. Induction heating is a controlled, safe, and efficient process for heating a metal's core in only a fraction of a second using electromagnetic fields. Ideal for mechanical engineering, commercial vehicle maintenance work, or repairing bent metal; this method of instantly and precisely transferring heat only works on ferrous materials and has no effect on rubber or plastics.

Removing Oxy-Acetylene from workshops not only improves safety, it also saves money on buying gas, renting cylinders, and can reduce premises insurance by up to 30%.

### Case Study

We recently supplied Powerduction units within a multi branch chain of workshops. Here is what the Leeds branch had to say:

#### Branch Manager

"It's great to see the back of Oxyacetylene; it takes a while to get set up, can cut through parts if you're not careful and when used regularly goes through a lot of gas. All things we don't have to worry about with induction. We've particularly found track rod ends to be so much easier with the GYS Powerduction unit, it saves us masses of time. We plug it in, heat a specific spot, and put it away again. It really has made a difference for us."

#### Mechanic

"Not only is the heat induction kit quicker than a gas torch, it's much safer and only heats the metal that you want, avoiding the surrounding areas. I feel much safer using heat induction over Oxyacetylene, I can get it into tighter spaces without worrying about catching sensors, wiring, and fuel lines. The machine we have is more than capable for all the jobs we use it for, most of the time it's only set to 50% power. We mainly use it on suspension components, anti-roll bar links, lower arms, wheel nuts and track rod ends."

## NOX SENSOR TAP KIT M20X1.5 & M22X1.5

**4577-WW**    **£114.95**

- **Damage Free Restoration:** The removal of the NOX sensor usually causes damage to the threads. The damage can also be caused by the high variation in temperature and carbonization. The WELZH kit allows for damage free restoration of the NOX sensor hole thread, with the alignment guides ensuring it is at the correct angle.
- **Extra Short:** Can be used with a socket or ratchet for hard to reach areas.
- **Time & Money Saver:** No need for a new exhaust system.
- **Universal:** For diesel particulate filter, any exhaust sensors, and those in a catalytic convertor.
